01 Overview & Quick Facts

The Deepal S07 is Changan South Africa's current premium electric coupe-SUV and is sold in one locally documented five-seat configuration under the public name Deepal S07. Its single rear-mounted motor produces 160 kW and 320 Nm. Current South African information pairs the S07's 80 kWh gross or nominal battery with 500 km on WLTP and 560 km on NEDC, while acceleration from rest to 100 km/h is listed at 7.9 seconds. Those cycles must remain labelled: WLTP is the more useful comparison against other vehicles carrying the same standard, while neither number predicts every South African trip. Packaging is substantial. Across a 2,900 mm wheelbase, the S07 body spans 4,750 mm in length, 1,930 mm in width and 1,625 mm in height. Normal or unladen ground clearance is 165 mm. The brochure lists a 125-litre front luggage compartment and 445-litre rear boot, letting owners separate charging cables or small items from the main cargo. Gross vehicle mass is 2,490 kg, tare 2,073 kg and gross combination mass 3,810 kg. Braked towing capacity remains not yet clarified; GCM and the presence...

Hagalu Editorial Verdict

"A well-defined single-grade EV with strong range and technology facts, but incomplete towing and charging detail."

Deepal S07's one-grade strategy is refreshingly direct. The buyer receives 160 kW, rear-wheel drive, the current 80 kWh battery, 500 km WLTP range, two luggage compartments and the full comfort and assistance package. The official 30–80 percent charge window and 7.9-second acceleration figure make the proposition more measurable. Remaining work centres on usable battery energy, AC/DC rates, real-world consumption, battery voltage, towing approval and complete warranty terms. A secure charging plan and an exact-vehicle road and charging test are prerequisites. With those in place, S07 offers a coherent premium EV alternative rather than a speculative technology showcase.

City Driving	Electric drive, a 360-degree camera and parking sensors can make repeated urban travel calm, but the S07 remains 1.93 metres wide and needs a measured bay. Test the camera at night, steering lock in the actual garage and door opening beside pillars. The 165 mm clearance is a normal value, not fully laden, so approach steep ramps and tall speed humps carefully. Use a known starting charge to record consumption with air conditioning, demisting and ordinary traffic. The 125-litre front compartment may keep a cable away from luggage, but cable reach and charge-port position must work in the home bay. Confirm whether the owner app, digital key and scheduled charging remain functional without a paid data subscription.
Highway	Use the 500 km WLTP number as a comparison standard, then build a conservative route plan from a legal-speed test with passengers, luggage and climate control. Wind, elevation, temperature, rain and 20-inch tyres can move consumption significantly. Complete a real 30–80 percent charge and record average power, time, taper and charger cost. The 7.9-second 0–100 figure indicates adequate published acceleration, but overtaking response and stability should be assessed directly. Adaptive cruise and lane systems can reduce workload without making the car autonomous. Keep a reserve for charger failure and identify alternatives. Do not attach a trailer until Changan publishes written braked and unbraked ratings for the exact S07.

Off-Road

The S07 is rear-wheel drive with 165 mm normal clearance and road-focused 20-inch tyres. That combination supports paved travel and careful maintained gravel, not a general off-road claim. Battery protection, loaded clearance, wading depth and recovery rules matter more than immediate motor torque on rough terrain. Avoid deep water, sharp rocks and rutted crests without explicit limits. On gravel, reduce speed to protect expensive tyres and leave enough charge to return if a remote public charger is unavailable. Recovery operators need the correct lift and tow procedure for a high-voltage rear-drive EV. A buyer facing difficult tracks regularly should choose a vehicle with verified clearance, tyre sidewall and recovery points rather than treating the coupe-SUV shape as proof of capability.

Best For

S07 is for a household wanting a premium, technology-led EV with rear-wheel drive, a long published WLTP range and useful front-plus-rear luggage storage. It best suits an owner with secure regular charging who can install or access the required equipment. The one-grade structure helps a buyer who wants the full assistance and comfort suite without navigating a trim ladder. It is less suitable for someone who needs a confirmed tow rating, regularly drives beyond dependable charging corridors or cannot accommodate a 4.75-metre vehicle. Apartment residents should obtain written charging permission before paying a deposit. Every buyer should price comprehensive insurance, 20-inch tyres, home electrical work and public fast charging alongside the vehicle payment.
