01 Overview & Quick Facts

Dongfeng's 06 is the brand's family-shaped electric SUV in South Africa, but the numbers explain its place in the range more clearly than the body style alone. It is 4,306 mm long, 1,868 mm wide and 1,645 mm tall, with a 2,715 mm wheelbase. Those dimensions put it above a city hatchback in cabin presence without making it a full-size seven-seat alternative. It is a five-seat vehicle intended for people who want everyday electric travel with room for school bags, a child seat, a laptop bag or a couple's weekend luggage. The local range splits properly by derivative. E1 uses a 44.94 kWh LFP battery and claims 401 km on the CLTC cycle. E3 moves to 51.87 kWh and 471 km CLTC. Both use a 120 kW, 230 Nm front electric motor, front-wheel drive and a quoted 150 km/h top speed. That is an important hierarchy: buyers pay more for the bigger battery and equipment rather than a more powerful motor. It means the test drive should concentrate on cabin comfort, parking support and the charging strategy as much as...

Body Style	5-door compact electric SUV
Launched	2026
Generation	Current South African Dongfeng 06 battery-electric SUV generation.
Fuel Types	Electric

06 E3	Electric	Single-Speed Reduction Gear	Top	ZAR 579,000

Estimated On-Road Price — 06 E1 (Base Variant)

Johannesburg	ZAR 515,988
Cape Town	ZAR 518,785
Durban	ZAR 513,890
Pretoria	ZAR 514,939

* On-road prices are estimates including registration, road tax and insurance.

03 Pros, Cons & Buyer Summary

● STRENGTHS ✓ Two clear battery and equipment choices ✓ 120 kW and 230 Nm shared by both grades ✓ E3 claims 471 km CLTC range ✓ E1 begins at an official R499,000 reference ✓ Quoted DC charging information published for both grades ✓ Five-seat SUV proportions	● CONSIDERATIONS ✗ CLTC range needs real-route interpretation ✗ No third-row seating ✗ E3 price comes from a dealer listing rather than an official retail table ✗ No published 0-100 km/h figure ✗ No documented off-road system ✗ Charging speed depends on charger capability and conditions
---	--

Buyer Summary

"A well-sized electric SUV whose choice comes down to charging needs, range reserve and the value of E3's equipment."

E1 is the disciplined choice when the car will charge overnight and cover mostly local or predictable regional routes. E3 is the better touring derivative because it combines the larger 51.87 kWh battery, 471 km CLTC claim, faster stated DC charging and a richer assistance suite. Neither choice makes sense without a charging plan, but the range structure is easy to understand and gives buyers a genuine reason to compare grades rather than simply chase the highest badge. That comparison should happen before a brochure turns equipment into an abstract score.

City Driving	In town, the 06 offers the kind of electric drivetrain that makes dense traffic less tiring: immediate response, no conventional gear changes and a quiet cabin. Its 1,868 mm width is still worth testing in the parking structures and school gates the owner actually uses. E1 provides the lower entry cost; E3's 360-degree camera and added assistance equipment may matter more than brochure language if it saves a stressful parking manoeuvre every day. Bring the child seat, stroller or usual work bag to the demonstration vehicle rather than judging space with an empty showroom car.
Highway	The 120 kW motor has enough output to make ordinary freeway merging feel confident, but longer highway use is where the battery difference needs a realistic test. A 471 km CLTC claim does not remove the normal effects of speed, headwinds, elevation and climate control. E3's quoted 167 kW DC capability and 18-minute 30-to-80-percent claim give it a stronger long-route brief than E1, provided the route has compatible, working chargers. E1 remains credible for occasional inter-city work if its 60 kW, 30-minute charging reference and 401 km claim fit the planned stops.
Off-Road	The 06 is an SUV in practicality and seating position, not a vehicle sold with low range, a locking differential or a published wading figure. It can deal with carefully driven gravel access and urban potholes only within the limits of its tyres, clearance and underfloor battery protection. A buyer whose weekly route includes sand, deep ruts or water crossings needs a vehicle with documented hardware for that work. For most owners, the more relevant rural question is whether charging is reliable at the destination.

Best For

The right 06 buyer has a family-size everyday load but does not need a third row. It suits a commuter or small family with predictable home or workplace charging who wants an upright driving position, a longer range reserve than a city hatchback and a sensible step-by-step choice between entry and better-equipped grades.

04 Variant Comparison Matrix

All 2 variants of the Dongfeng 06 side-by-side. Use this to spot the smallest differences quickly — fuel, power, gearbox and price all in one view.
