01 Overview & Quick Facts

The T60 Utility Single Cab joined LDV South Africa's range in August 2026 as a focused commercial alternative to the established double cab. It is a factory-bodied single cab rather than a bare chassis cab. The launched vehicle is a single cab with a manufacturer-supplied pickup body, offered in two confirmed variants: 4x2 and 4x4. Both use the same 2.0-litre turbo-diesel, six-speed manual transmission and work-oriented cabin. That tight range makes the choice primarily about traction rather than trim decoration. LDV rates the engine at 120 kW and 410 Nm, giving the Utility a different torque figure from the 375 Nm Elite and Pro double cabs. The official launch release quotes up to 1,170 kg payload, a 73-litre fuel tank and 3,000 kg braked towing. It also publishes 7.5 litres per 100 km for highway driving and 8.7 litres per 100 km in urban use. These route-specific figures are useful for fleet planning, provided buyers model their own load, idling, terrain and driver behaviour instead of assuming an empty test cycle will equal a working month. The body measures 5,395...

Body Style	Two-seat single-cab pickup with manufacturer-supplied cargo body
Launched	2026
Generation	Current South African T60 Utility single-cab pickup with shared diesel-manual architecture and separate 4x2 and 4x4 variants.
Fuel Types	Diesel
Colours	The launch announcement does not publish a complete colour matrix; confirm available commercial finishes with the supplying dealer.

03 Pros, Cons & Buyer Summary

● STRENGTHS ✓ Up to 1,170 kg payload ✓ Three-tonne braked towing ✓ Factory pickup body ✓ 120 kW and 410 Nm diesel ✓ 4x2 and 4x4 choice ✓ Published urban and highway consumption	● CONSIDERATIONS ✗ Manual transmission only ✗ Only two occupants ✗ Long overall body ✗ No finalized automatic variant ✗ Colour matrix not published ✗ Service-plan terms need confirmation
--	--

Buyer Summary

"A credible load-first pickup with a clean two-variant decision."

The Utility Single Cab is one of the clearest LDV choices because both derivatives share the same engine, manual gearbox, body and core equipment. A business chooses 4x2 for stable routes or 4x4 for repeated traction demands. The strong published payload, three-tonne towing rating and route-specific consumption figures support planning. Limits are equally clear: only two occupants, no automatic, a long urban footprint and a service-plan position that commercial buyers should document before signing. The final order also needs the exact payload plate, service-plan price and accessory warranty attached.

City Driving	Urban delivery work benefits from the 410 Nm diesel, air conditioning and Bluetooth radio, but the 5.395-metre length requires planned bays and careful reversing. The six-speed manual adds clutch work in stop-start traffic. A fleet manager should trial the longest normal shift, measure fuel with representative cargo and verify that racking or a toolbox leaves enough legal payload. The published 8.7 l/100 km urban figure is a reference, not an operating guarantee.
Highway	The official 7.5 l/100 km highway figure and 73-litre tank give a useful planning base for regional routes. The 3,000 kg braked towing rating supports substantial trailers, but trailer nose mass, occupants and fitted equipment reduce cargo margin. Test stability with the actual body load distribution, confirm tyre pressures at working mass and include scheduled rest, service and fuel stops. The 4x2 avoids carrying a traction system that a sealed-road business may never engage.
Off-Road	The 4x4 exists for farms, sites and routes where loose inclines, mud or broken access are ordinary rather than occasional. The 4x2 remains suitable for maintained gravel and firm yards when tyres and rear-axle loading are appropriate. A differential lock is confirmed in the launch equipment, but buyers should establish its operating instructions on the exact variant. Recovery points, water depth, underbody clearance and accessory compatibility require confirmation before remote deployment.
Best For	This model is aimed at owner-operated trades, agriculture, construction, municipal fleets, security services and delivery businesses that value load capacity more than rear seats. The 4x2 suits stable routes; the 4x4 earns its cost where difficult access is frequent and documented.

04 Variant Comparison Matrix

All 2 variants of the Ldv T60 Utility Single Cab side-by-side. Use this to spot the smallest differences quickly — fuel, power, gearbox and price all in one view.
